\_\_\_\_\_ I understand that botulinum toxin injections, such as Botox Cosmedic and Dysport temporarily relax the facial muscles and soften wrinkles such as frown lines and Crow's feet.

\_\_\_\_\_ I understand that aspirin and non-steroidal anti-inflammatory drugs, such as Advil and Motrin can thin the blood and make complications more likely. Because of that I need to avoid the products for one week before a treatment.

\_\_\_\_\_ I understand that botulinum toxin injection complications are rare but they do occur. The most common side effect is a temporary drooping of an eyelid or eyebrow. When this does occur it is usually mild and it only lasts 1-2 weeks.

\_\_\_\_\_ I understand that botulinum toxin injections is measure in units . The amount of botulinum toxin required to relax muscles for 3-4 months is different for everyone. Larger muscles require more units.

\_\_\_\_\_ I have read this consent thoroughly and all my questions have been answered to my satisfaction.
